

Project Development Phase

Model / Flow Performance Test

Date	01 October 2026
Team ID	SWTID-2026-7609
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Technology	ServiceNow Flow Designer
Project Type	IT Procurement Automation

Project team shall fill the following information in the performance testing template.

S.No.	Parameter	Values	Screenshot
1	Flow Summary	A Flow Designer flow named "Standard laptop tasks" was built for standard laptop orders. It starts when a laptop is ordered from the Service Catalog. The flow checks the request, creates a catalog task for the Hardware group, and sends the order to the fulfillment team. The flow is linked to the Standard Laptop catalog item under the Process Engine tab, so every order uses it automatically.	 Figure 1: Flow Designer - "Standard laptop tasks" flow with Service Catalog trigger and Create Catalog Task action
2	Automation Performance	Trigger: Standard laptop order placed from the Service Catalog Actions: Validate request → approval/condition check → create catalog task (assigned to Hardware group) → notify requester	 Figure 2: Flow execution - Request REQ0010001 created with requested item RITM0010001 (Standard Laptop, \$1,100.00)
3	Success Criteria	A valid standard laptop order moves through the flow without manual routing. The approval is generated and the catalog task is created automatically as per the set conditions.	 Figure 3: Catalog task SCTASK0010001 created automatically for the approved laptop request

S.No.	Parameter	Values	Screenshot
4	Test Result	Passed with observations. The laptop order created the request, the approval, and the catalog task as expected. Observation: the approval was shown in "Requested" state until the approver acted on it, so the task started only after approval.	 Figure 4: Approval record for REQ0010001 after approval, with request state updated
5	Fine Tuning Result (if Done)	After testing, the following changes were made: • Short description set to "laptop need to configured" for clear task details. • Assignment group set to "Hardware" so tasks go to the right team. • Approval field set to "Requested" in the Create Catalog Task action. • Flow activated again after the changes.	 Figure 5: Updated flow - action inputs with Assignment group and Approval fields set
6	Validation Result	Validated. After the changes, a new order created the request, approval and catalog task correctly, and the task showed the right short description and request item.	 Figure 6: Validation - Catalog task SCTASK0010001 linked to RITM0010001 with correct details

Suggested Test Cases

Test Case	Input / Condition	Expected Result	Actual Result	Status
TC01	Valid standard laptop request	Flow triggers and proceeds through configured steps	Request REQ0010001 was created and the flow ran through all steps.	Passed
TC02	Missing required request information	Flow stops or routes for correction according to configuration	Not tested in this recording. To be checked in the next test cycle.	Pending
TC03	Approval required	Approval is generated and flow continues after approval	Approval record was generated (state: Requested) and the flow continued after it was approved.	Passed

Test Case	Input / Condition	Expected Result	Actual Result	Status
TC04	Request approved	Procurement/fulfillment task is created and requester is notified	Catalog task SCTASK0010001 was created for the approved request.	Passed
TC05	Request rejected	Flow follows rejection path and requester receives notification	Not tested in this recording. To be checked in the next test cycle.	Pending

Note: This project is primarily a workflow/process automation project using ServiceNow Flow Designer. Therefore, traditional ML metrics such as training accuracy and validation accuracy are not applicable unless a separate AI/ML model is incorporated.
