

Functional & Performance Testing Template

GenAI / Flow Designer Project Testing

Date	01 October 2026
Team ID	SWTID-2026-7609
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Technology	ServiceNow Flow Designer
Project Type	IT Procurement Workflow Automation

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Standard Laptop Request Validation	Submit a laptop request with all required details such as requester, laptop type, quantity and justification.	Valid request is accepted and the Flow Designer flow is triggered.	Request REQ0010001 was created with item RITM0010001 (Standard Laptop, \$1,100.00). The flow was triggered.	Pass
FT-02	Required Field Validation	Submit a request with one or more required fields left blank.	Request is rejected or held for correction according to the configured validation.	Not tested in the recorded run. To be checked in the next test cycle.	Pending
FT-03	Standard Laptop Criteria Check	Submit a request that matches the predefined standard laptop criteria.	Flow identifies the request as a standard laptop order and follows the automated path.	The Standard Laptop item (Hardware category) is linked to the "Standard laptop tasks" flow and followed the automated path.	Pass
FT-04	Approval Flow Check	Submit a request that requires approval and complete the approval step.	Approval is generated and the flow continues after approval.	Approval record was generated (state: Requested) and the request moved on after it was approved.	Pass
FT-05	Procurement Task Creation	Complete a valid approved laptop request and inspect the resulting tasks.	Procurement/fulfillment task is created with the correct request information.	Catalog task SCTASK0010001 was created with request item RITM0010001 and short description "laptop need to configured".	Pass
FT-06	Rejected Request Handling	Submit a request and reject it during the approval stage.	Flow follows the rejection path and updates/notifies the requester.	Not tested in the recorded run. To be checked in the next test cycle.	Pending
FT-07	Requester Notification	Run a valid request through the flow and check notifications.	Requester receives the configured status/fulfillment notification.	Notification output was not shown in the recording. To be verified.	Pending
FT-08	Flow Execution Check	Execute the complete standard laptop order process from request to fulfillment task.	All configured flow actions execute in the correct sequence without errors.	Request, approval and catalog task were created in the correct order. No errors were seen.	Pass

Performance Testing

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
PT-01	Flow Response Time Test	Start a standard laptop request and measure the time taken for the flow to trigger and begin processing.	Flow should start within the acceptable response time configured for the ServiceNow environment.	Flow started right after the request was placed. Exact time to be recorded.	Pending
PT-02	Multiple Request Load Test	Submit multiple standard laptop requests within a short period.	Requests should be processed without significant delay, failure, or incorrect task creation.	Single request tested so far. Multiple requests to be tested.	Pending
PT-03	Concurrent Approval Test	Create multiple requests requiring approval and process approvals concurrently.	Approval and downstream flow actions should remain responsive and correctly associated with each request.	To be tested.	Pending
PT-04	Flow Execution Stability Test	Run repeated standard laptop orders through the complete flow.	Flow should execute consistently without crashes, duplicate tasks, or missed notifications.	No crash or duplicate task seen in the recorded run. Repeated runs to be tested.	Pending
PT-05	Notification Performance Test	Process multiple requests and monitor notification generation.	Notifications should be generated correctly without excessive delay or duplication.	To be tested.	Pending

Test Evidence

Evidence	Screenshot
FT-01: Request created	 The screenshot shows the ServiceNow interface for a new request. The top navigation bar includes 'Request - REQ0010001' and a search bar. Below the navigation bar, there's a section for 'Activities' with a table showing the request details: Request Number (REQ0010001), Requested for (System Administrator), Location, Due date (2024-10-02 22:28:30), Price (\$1,100.00), and Assigned to (empty). The 'Requested Items' table shows one item: RITM0010001, Quantity 1, Catalog Item Standard Laptop, Due date 2024-10-02 22:28:30, Price \$1,100.00, and Assigned to (empty). The status is 'Requested'. Request REQ0010001 with requested item RITM0010001
FT-03: Flow linked to the Standard Laptop item	 The screenshot shows the 'Catalog Item - Standard Laptop' page. The 'Process Engine' tab is selected, showing a flow diagram. The flow starts with 'Standard Laptop task' and leads to 'Standard Laptop task'. The 'Process Engine' tab is highlighted, and the flow is visible. Catalog item "Standard Laptop" - Process Engine tab shows the flow
FT-04: Approval generated	 The screenshot shows the 'Approval - Request REQ0010001' page. The 'Request' tab is selected, showing the request details: Number (REQ0010001), Requested for (System Administrator), Location, Due date (2024-10-02 22:28:30), Price (\$1,100.00), and Description. The 'Approval' tab is also visible, showing the approval status: Requested, Pending Approval, and Approved. The 'Work notes' section is empty. Approval record for REQ0010001 (state: Requested)
FT-05 / FT-08: Task created	 The screenshot shows the 'Catalog Task - SCTASK0010001' page. The 'Task' tab is selected, showing the task details: Task Number (SCTASK0010001), Configuration Item (empty), Class (empty), Support group (empty), Owned by (empty), Applied date (empty), Manual proposed change (empty), and Updated (empty). The 'Work notes' section is empty. Catalog task SCTASK0010001 created for the request

Note: The uploaded source template contains generic GenAI functional and performance scenarios. For this project, they have been adapted to test the ServiceNow Flow Designer workflow for standard laptop procurement. Actual Result and Pass/Fail fields should be completed after executing the tests.
