

Project Development Phase

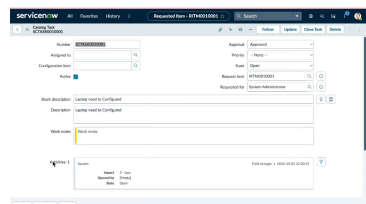

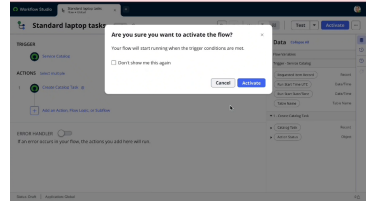

Machine Learning / Model Performance Test

Date	03 October 2026
Team ID	SWTID-2026-7609
Project Name	Streamlining IT Procurement Through Standard Laptop Order Automation
Maximum Marks	10 Marks
Technology	ServiceNow Flow Designer (Workflow Studio)

Model Performance Testing

Project team shall fill the following information in the model performance testing template.

S.No.	Parameter	Values	Screenshot
1	Metrics – Classification / Decision Model	Not Applicable (N/A). No ML classification model is used in this project. Laptop orders are handled by fixed rules in the flow and by the catalog price-based approval, so Confusion Matrix, Accuracy, Precision, Recall, F1 Score and Classification Report are not applicable.	Not applicable
2	Metrics – Regression Model (if used)	Not Applicable (N/A). No regression model is used for procurement prediction. MAE, MSE, RMSE and R ² Score are not applicable.	Not applicable
3	Model Purpose	No ML model is used. The "Standard laptop tasks" flow is triggered from the Service Catalog when a Standard Laptop is ordered. Once the request is approved, the flow creates a catalog task for the Hardware group, so the order moves from request to fulfilment automatically.	 Standard Laptop item linked to the flow (Process Engine tab)
4	Hyperparameter Tuning	Not Applicable (N/A). There is no ML model, so there are no model parameters to tune. Instead, the flow's Create Catalog Task action was configured with the short description, description, assignment group (Hardware) and approval field.	 Flow action inputs: description and Hardware assignment group

S.No.	Parameter	Values	Screenshot
5	Validation Method	Functional validation of the flow by running one laptop order (REQ0010001, \$1,100) from request to approval to catalog task. Train/Test split and cross-validation are not applicable.	 Catalog task SCTASK0010001 after the final run
6	Final Model Result	Selected model: None (rule-based Flow Designer flow). Final result: Flow passed functional testing (request, approval and catalog task created correctly). Model accepted for integration: Not applicable. The flow was activated in Flow Designer.	 Flow activation in Flow Designer
